

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

THE FUR-SEAL INVESTIGATION OF 1896.

THE preliminary report of the commission appointed in June, 1896, to investigate the condition of the northern fur-seals has recently been issued, although it has been in print for some time. It gives a resumé of the summer's work and of the conclusions reached, and will be followed later on by a full report giving in detail the observations and facts on which this summary is based. The work was prosecuted under exceptionally favorable conditions, not only from the facilities afforded the commission, but from the number of observers engaged, since what was not seen at one time or place might be seen at another, while the representatives of the various governments worked harmoniously together in the accumulation of data. Much, too, is also due to the thorough manner in which the work was planned and carried on by Dr. Jordan, the head of the American commission, while finally the reduced number of seals facilitated the work of observation.
